## Education

---

### B.Tech in Information Technology

2023 - Present

Kalinga Institute of Industrial Technology

CGPA: 7.84

## Skills

---

**Languages:** Python, C, SQL

**Frameworks/Libraries:** TensorFlow, Streamlit, Numpy, Pandas

**Backend and APIs:** REST APIs, CRUD operations, HTTP methods, JSON

**Database:** Mysql

**Tools:** Git, VScode, GitHub, Postman, MS Excel

**Core CS:** Data Structures and Algorithms, DBMS, Operating Systems, OOP, Data Analytics, Software Eng.

**Communication:** English, Hindi, Odia, Indian Sign Language(Basics)

## Experience

---

### • Team Lead: Smart India Hackathon

- Led a team in developing an AI-powered cattle breed classification system using machine learning model training and testing
- Trained the model on a dataset of 1000+ cattle images and achieved over 90% prediction accuracy
- Coordinated development tasks, testing workflows, and project delivery under strict hackathon deadlines

## Projects

---

### • Cattle Breed Classifier (AI-Based)

- **Tech stack:** Python, TensorFlow, Streamlit, NumPy, JSON
- Built an AI-powered cattle breed classification system using TensorFlow and image datasets
- Applied preprocessing and dataset optimization techniques to improve prediction accuracy
- Developed a Streamlit-based interface for real-time breed prediction

### • Grocio: Online Grocery Platform

- Developed a full-stack grocery shopping platform with product catalog, cart, and order management features
- Built backend APIs for handling user requests, product data, and order processing
- Improved user experience through organized product browsing and smooth cart functionality

### • Food Delivery Tracker

- Developed a real-time food delivery tracking system using APIs for live order status updates
- Designed backend logic for handling delivery data and user interactions

### • Task Manager API

- Built RESTful APIs supporting CRUD operations for efficient task management
- Tested API endpoints using Postman to ensure reliable request handling and performance

## Certifications

---

- Foundations: Data, Data, Everywhere by Google (via Coursera)
- Business for Good: Fundamentals of Corporate Responsibility by London Business School (via Coursera)
- Ethical Decision Making for Success in the Tech Industry by University of Colorado Boulder (via Coursera)
- Corporate Governance (via Coursera)

## Summary

---

Information Technology undergraduate with experience in Python, SQL, and AI/ML projects. Built applications using TensorFlow, Streamlit, SQL, and Git, with strong interest in software engineering and backend development. Active football player with experience representing college in inter-college tournaments.
